

4500 Watts

- Controllable output voltage
- <40ms slew rate
- 3 Phase 180 to 264VAC input
- High efficiency, up to 90%
- 5V, 1A standby output
- Intelligent fan speed control
- Fully featured signals & controls
- I_C interface
- 0°C to +70°C operating temperature
- SEMI F47 compliant
- Full power to +50°C
- 3 Year Warranty

Dimensions

HPD4K5:

15.0 x 4.25 x 6.5" (381.0 x 107.95 x 165.1 mm)

The HPD4K5 series offers users output voltage programming via a 0-5V external signal in a high efficiency, high power density 4.5 kW chassis mount package. Measuring just 15.0" x 4.25" x 6.5". The HPD4K5 also features remote on/off, current monitor, fault reporting and a power OK signal. The 5V standby output is available whenever the mains supply is present. A PMBus interface is provided for signal & status monitoring.

Signals & Controls

Characteristic	Notes & Conditions
Signals & Control	
AC OK	AC OK is an optocoupler transistor, referenced to signal ground, providing a minimum of 2 ms warning of the output falling to 90% of maximum output voltage. The signal is fully isolated and the collector and emitter must be connected externally. The transistor is normally on when AC is healthy. See fig. 6.
DC OK	DC OK is an optocoupler transistor, referenced to signal ground, providing warning of loss of output. The signal is fully isolated and the collector and emitter must be connected externally. The transistor is normally on when output DC is healthy. See fig. 7. DCOK tracks set point and triggers at <95%.
Inhibit	Optocoupler diode referenced to signal ground. Powered diode inhibits the supply. See fig. 8.
Fault	Fault is an optocoupler transistor, referenced to signal ground, providing warning of either power fail, DC fail, overtemperature or Fan Fail. The signal is fully isolated and the collector and emitter must be connected externally. The transistor is normally off when there is no fault. See fig. 9. Under Fan Fail conditions the unit will shutdown.
V Program	The voltage program function allows 10/20% to 100% remote adjustment of V1 via 0-5V signal referenced to return J1 pins 7 & 8. See fig. 10 & Models & Ratings table. If V program is open circuit, output voltage is 0V.
Current Monitor	0-5V signal for 0-100% load. I monitor, J1 pin 6 referenced to return see fig. 11
5V Standby (V2)	5 V/1 A supply, always present when AC supplied
PMBus	The PMBus specification is detailed in the separate document - HPD4K5 Communication, Control & Status Specifications. PMBus signals referenced to return J1 pins 7 & 8

Signals & Controls

AC OK/Power Fail

AC OK is an isolated signal providing a minimum of 3 ms warning of loss of output regulation. The signal is fully isolated and the collector and emitter must be connected externally.

Maximum sink current 2 mA, maximum voltage 20 V.

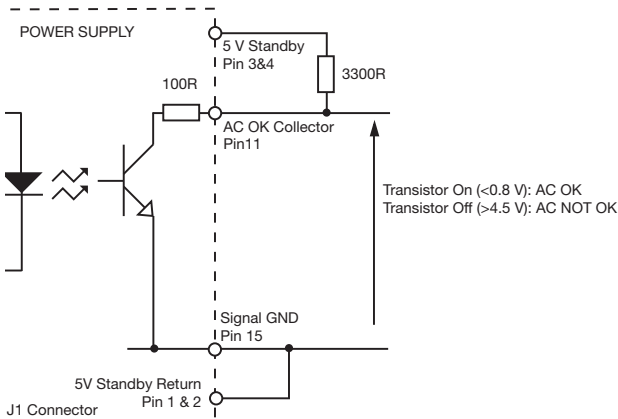

Figure 6

Inhibit

Inhibit is an isolated control signal which can turn the power supply and fans off by supplying 2 to 5mA into the pin.

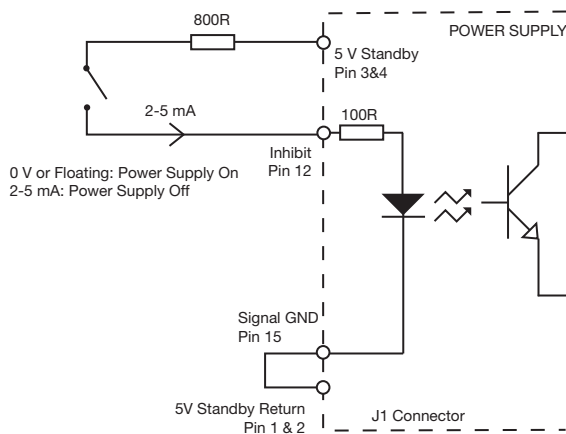

Figure 8

V Program

V Program allows remote voltage adjustment within the range 10/20% to 100%. See Models & Ratings table.

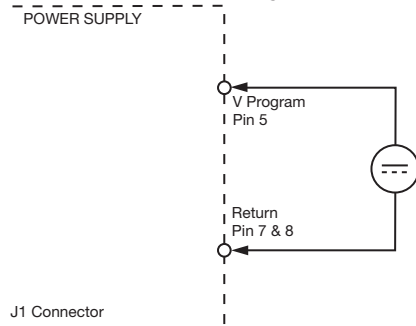

Figure 10

DC OK

DC OK is an isolated signal providing warning that the output voltage has fallen below 90% of nominal. The signal is fully isolated and the collector and emitter must be connected externally.

Maximum sink current 2 mA, maximum voltage 20 V.

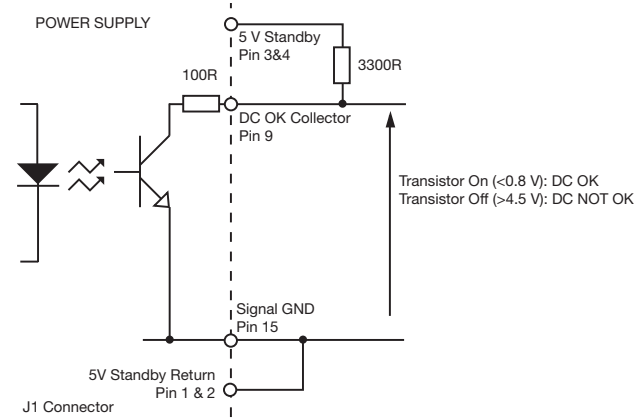

Figure 7

Fault

Fault is an isolated signal providing warning of either Power Fail, DC Fail or Overtemperature. The signal is fully isolated and the collector and emitter must be connected externally. Maximum sink current 2 mA, maximum voltage 20 V.
