# Application Notes

## Thermal Considerations - U Channel

Single Output Models

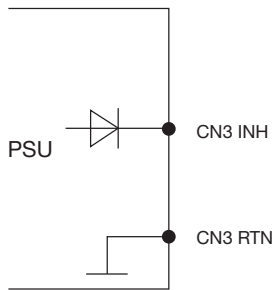

Dual Output Models

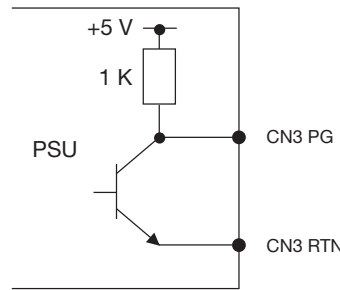

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table (right) must not be exceeded. See drawing above for component locations. The temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of any direct airflow).

Temperature Measurement	
Component	Max Continuous Temp °C
C26	85
C6	105
C21	105
L6	120
T1 Coil	120

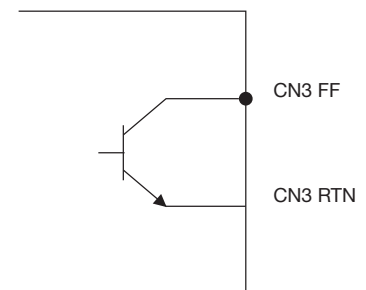

### Remote On/Off (INH)

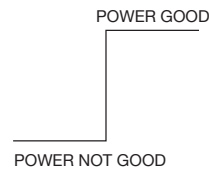

### Power Good (PG)

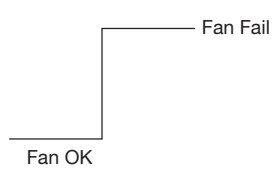

### Fan Fail (FF)

- Note:**
1. Applying <math><0.3\text{ V}</math> or short between pins INH and RTN turns the output OFF.
  2. Applying >math>>4.5\text{ V}</math> or open circuit between pins INH and RTN turns output ON.

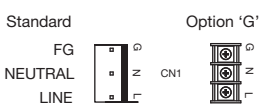

**Note:**  
Sink current = 6 mA, Source current = 1 mA  
Power is good 100-500 ms after output is in regulation.  
Power not good at least 1 ms before loss of regulation.

**Note:**  
1. Open collector signal: 28V maximum voltage and 5 mA (maximum sink current)
