XTL30 fleXPower Series

AC-DC POWER SUPPLIES

3kW FAN COOLED

The 3 phase XTL30 fleXPower series is a modular power supply which can be configured into a bespoke solution for quick delivery of samples, prototypes and low volume production with up to 3000 Watts of output power. Configurations may comprise of up to 7 modules chosen from 44 single output modules and 16 dual output modules ranging from 3.3V at 66W to 60V at 750W. Modules may be combined in series or parallel to create a single output at the chassis power rating. Modules of unlike power can be paralleled and will current share within 10%.

Opto-isolation of control and monitoring signals provides further configuration flexibility, including a global Inhibit/Enable function. A continuous 5V/2A housekeeping output is present when the AC supply is active. The XTL30 fleXPower consists of a chassis in which there are 20 slots, allowing for up to 10 individual modules A single phase input version is available, see fleXPower datasheet for details.

Features

- Configurable for fast time to market
- Flexible series and parallel capability
- EN62368-1 and UL62368 safety approvals
- 3 phase input 180 to 264VAC
- 1-20 outputs
- Variable speed fan (optional)
- Fully featured signals and controls
- -20°C to +70°C operating temperature
- 3 year warranty

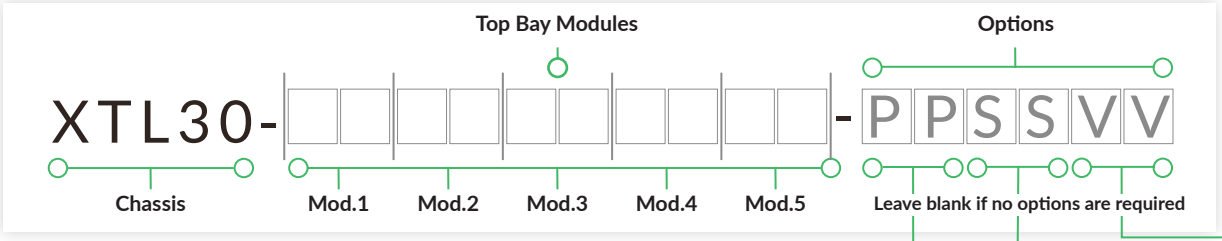
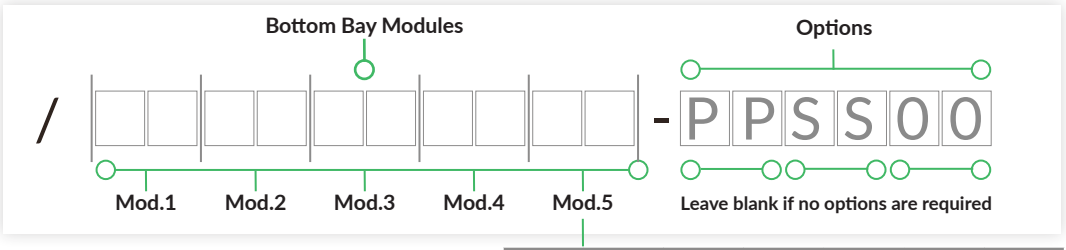
XTL30 fleXPower Series

Configuration

The XTL30 fleXPower range allows for simple configuration of a custom modular power supply with up to ten outputs. The chassis consists of twenty slots, and modules are either two, three or four slots wide.





Step 1

XTL30 can accommodate up to ten modules, resulting in an extensive range of output combinations. However, as all modules are designed to fit across either 2, 3 or 4 slots in the chassis, configuration is very simple. Select the appropriate modules for your output requirements, ensuring that all modules will fit in the chassis. First, insert 7 or 4 series modules, ordered lowest voltage to highest. Next in order, insert 3 series modules, ordered lowest voltage to highest. Follow with 2 series, then 5 series dual output, ordered alphabetically A-Z. Then 1 series, ordered lowest voltage to highest.

Step 2

Add any required options. These are grouped into three types; parallel options, series options and other options. The standard signal set for each chassis includes Global Inhibit, Global DC OK and Global AC OK, each having logic 0 operation. Optionally a logic 1 operating version of each is available along with reverse air flow.

Total power for dual output module must not exceed 175W max. 5 series modules require 10% load on output 1 to meet specified regulation on output 2.

*No minimum load needed on output 1 for regulation.

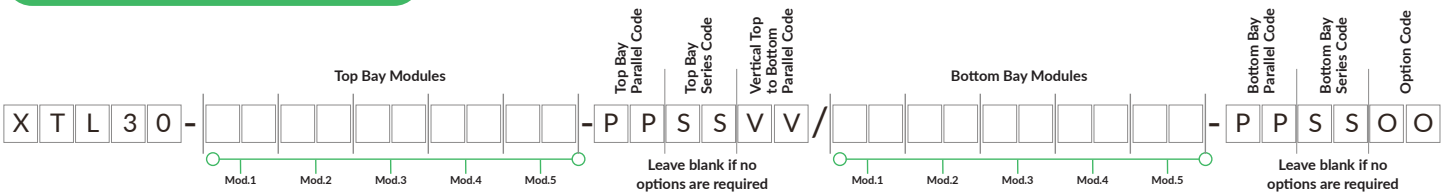
Configuration Examples



- Configuration for XTL30 is Chassis - Top Bay - Options
  Bottom Bay - Options
- Maximum 1500W for each bay, power to be evenly distributed between top and bottom bays.
- Option codes within each bay are listed in the modules table.
- The fan control card is mounted in the bottom bay, as standard. Contact sales for alternative location.
- 1st and 2nd digits = parallel like voltages, including vertical parallel.
- 3rd and 4th digits = series option designation.
- 5th and 6th digits = other option codes. (5th and 6th digits fan card options 16 to 30 is called out for one bay only, either top or bottom).

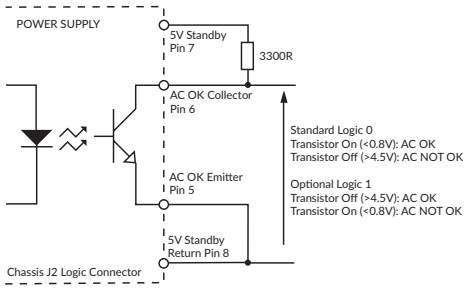
Signals

Global AC OK/Power Fail

Global AC OK is an isolated transistor of an optocoupler providing a minimum of 5ms warning of loss of output regulation. The signal is fully isolated and the collector and emitter must be connected externally.

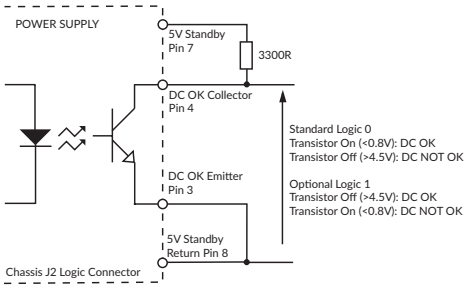
Maximum sink current 2mA, maximum voltage 20V.



Global DC OK

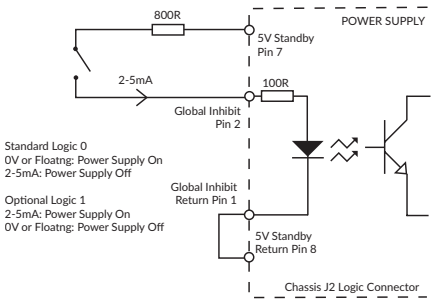
Global DC OK is an isolated transistor of an optocoupler providing warning that the output voltage has fallen below 90% of nominal. The signal is fully isolated and the collector and emitter must be connected externally.

Maximum sink current 2mA, maximum voltage 20V.
On Dual output module, DC OK monitors V1 output only.



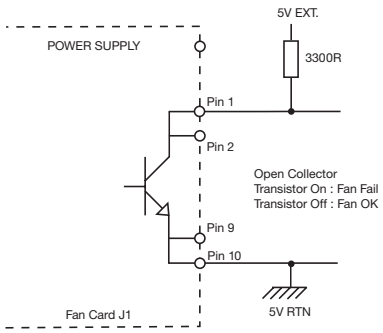
Global Inhibit

Global Inhibit is an isolated control signal input which turns the power supply off by supplying 2 to 5mA into the pin. Global Enable option available, see 'Other Option Codes' table.



Fan Fail

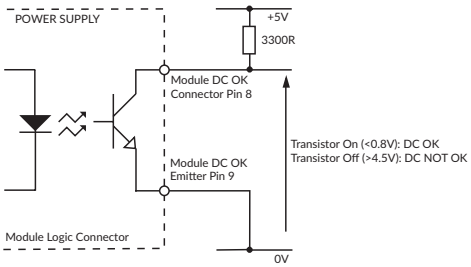
When fan speed control fitted (option 16)
Open connector signal warns of any fan failure.
Note: Can use 5V standby for 5V EXT.



Module DC OK

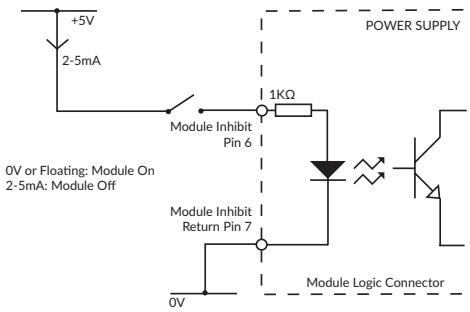
Module DC OK is a nominal "ON" isolated transistor of an optocoupler which provides a warning of the loss of output regulation on the main output of the module.

Maximum sink current 2mA, maximum voltage 20V.



Module Inhibit

Module Inhibit signal is an isolated control signal which turns the module off by supplying 2 to 5mA into the pin. '4' series modules have a 100R internal series resistor. Add resistance as necessary to maintain drive current at 2 to 5mA.



Current Share

Connecting pins 2 and 4 of like voltage modules (4 maximum) within the same chassis or separate chassis will force the current to share between the outputs. Different slot width modules share in proportion to their output current rating.
