

1.5kW Fan cooled

AC-DC power supplies

The 3 phase XTL15 fleXPower series is a modular power supply which can be configured into a bespoke solution for quick delivery of samples, prototypes and low volume production with up to 1500 Watts of output power. The output comprises of up to 7 modules chosen from 44 single output modules and 16 dual output modules ranging from 3.3V at 66W to 60V at 750W. The modules can be placed in series or in parallel to give a single output at the chassis rating.

Signals are floating and allow for configuration as active low or active high and include AC OK, global DC OK and module DC OK. There is a global inhibit signal which can alternatively be configured as a global enable and a 5V standby supply which is present whenever the AC supply is applied. The XTL15 fleXPower consists of a chassis in which there are 14 slots, allowing for up to 7 individual modules. A single phase input version is available, see fleXPower datasheet for details

Features

- ▶ 1.5kW fan cooled
- ▶ Configurable for fast time to market
- ▶ Slots for up to 7 output modules
- ▶ Output modules 3V3 to 60VDC
- ▶ Module power up to 750W
- ▶ 3 phase input range 180 to 264VAC
- ▶ Flexible series & parallel capability
- ▶ ITE & industrial or medical (2 x MOPP) versions
- ▶ SEMI F47 compliant
- ▶ Optional fan speed control
- ▶ Reverse air option - no derating
- ▶ 5V 1A standby
- ▶ -20°C to +70°C operating temperature
- ▶ 3 year warranty

Applications

Dimensions

279.4 x 177.8 x 63.5mm (11.00" x 7.00" x 2.50")

Configuration examples

The XTL15 range allows for simple configuration of a custom modular power supply with up to seven outputs. The chassis consists of fourteen slots, and modules are either two, three or four slots wide.

Step 1

XTL15 can accommodate up to seven modules, resulting in an extensive range of output combinations. However, as all modules are designed to fit across either 2, 3 or 4 slots in the chassis, configuration is very simple. Select the appropriate modules for your output requirements, ensuring that all modules will fit in the chassis. First, insert 7 or 4 series modules, ordered lowest voltage to highest. Next in order, insert 3 series modules, ordered lowest voltage to highest. Follow with 2 series, then 5 series dual output, ordered alphabetically A-Z. Then 1 series, ordered lowest voltage to highest.

Step 2

Add any required options. These are grouped into three types; parallel options, series options and other options. The standard signal set for each chassis includes Global Inhibit, Global DC OK and Global AC OK, each having logic 0 operation. Optionally a logic 1 operating version of each is available along with reverse air flow.

Dual output - module voltage/current rating					
Output 1		Output 2		Slots	Code
Voltage	Current	Voltage	Current		
5.0VDC	10.0A	5.0VDC	10.0A	2	5A
5.0VDC	10.0A	3.3VDC	10.0A	2	5B
12.0VDC	10.0A	12.0VDC	8.0A	2	5D
15.0VDC	8.0A	15.0VDC	6.0A	2	5E
15.0VDC	8.0A	15.0VDC	6.0A	2	6E*
15.0VDC	8.0A	12.0VDC	8.0A	2	5F
12.0VDC	10.0A	5.0VDC	10.0A	2	5G
12.0VDC	10.0A	3.3VDC	10.0A	2	5H
12.0VDC	10.0A	2.0VDC	10.0A	2	5J
15.0VDC	10.0A	5.0VDC	10.0A	2	5K
15.0VDC	10.0A	3.3VDC	10.0A	2	5L
15.0VDC	10.0A	2.0VDC	10.0A	2	5M
24.0VDC	6.0A	5.0VDC	10.0A	2	5N
24.0VDC	6.0A	5.0VDC	10.0A	2	6N*
24.0VDC	6.0A	3.3VDC	10.0A	2	5P
24.0VDC	6.0A	2.0VDC	10.0A	2	5Q

Total power for dual output module must not exceed 175W max. 5 series modules require 10% load on output 1 to meet specified regulation on output 2.

*No minimum load needed on output 1 for regulation.

Example

XTL15-3C3L2C-000001

(Leave gray numbers blank if no options are required)

XTL15 - 1500W industrial 3Ø chassis, 14 module slots available.

3C - 3.3V @ 60.0A. Three slot width module.

3L - 15.0V @ 20.0A. Three slot width module.

2C - 3.3V @ 40.0A. Two slot width module.

00 - No parallel option.

00 - No series option.

01 - Reverse air.

1. Peak power available for 10 seconds with 35% duty cycle, if peak power rating is exceeded output may latch, recycle input to reset.
2. '4' series modules not recommended for new designs.

Paralleling is supported only between identical output modules. Modules connected in parallel must have the same output voltage and the same power rating (same module code). Do not parallel different module codes, even if the nominal voltage is the same. If an exception is required, contact XP Power for review.

Example: Allowed: 2P + 2P, 3J + 3J+3J, 7P + 7P, Not allowed: 2P + 7P, 3J + 4J, 1P+2P+3P

Signals

Global AC OK/power fail

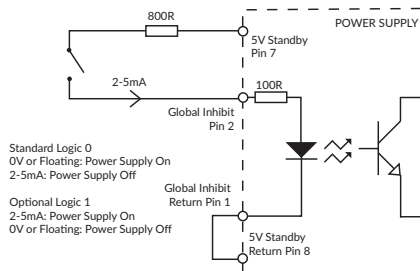

Global AC OK is an isolated transistor of an optocoupler providing a minimum of 5ms warning of loss of output regulation. The signal is fully isolated and the collector and emitter must be connected externally.

Maximum sink current 2mA, maximum voltage 20V.

Global inhibit

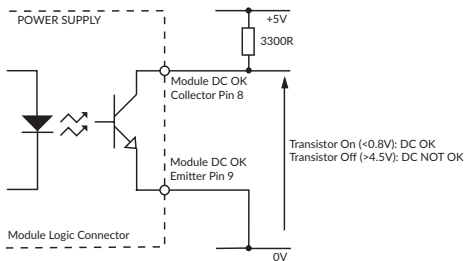

Global Inhibit is an isolated control signal input which turns the power supply off by supplying 2 to 5mA into the pin. Global Enable option available, see 'Other Option Codes' table.

Module DC OK

Module DC OK is a nominal "ON" isolated transistor of an optocoupler which provides a warning of the loss of output regulation on the main output of the module.

Maximum sink current 2mA, maximum voltage 20V.

Current share

Connecting pin 4 of like voltage and power modules (4 maximum) within the same chassis or separate chassis will force the current to share between the outputs.

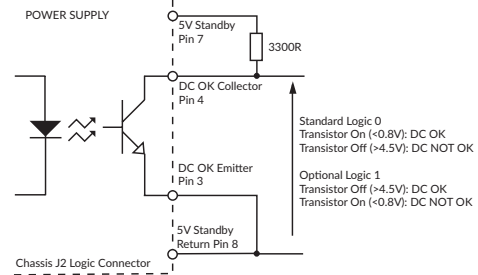

Global DC OK

Global DC OK is an isolated transistor of an optocoupler providing warning that the output voltage has fallen below 90% of nominal. The signal is fully isolated and the collector and emitter must be connected externally.

Maximum sink current 2mA, maximum voltage 20V.

On Dual output module, DC OK monitors V1 output only.

Fan fail

When fan speed control fitted (option 16).

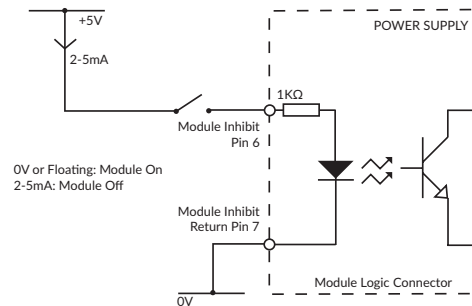

Open connector signal warns of any fan failure.

Note: Can use 5V standby for 5V EXT.

Module inhibit

Module Inhibit signal is an isolated control signal which turns the module off by supplying 2 to 5mA into the pin. '4' series modules have a 100R internal series resistor. Add resistance as necessary to maintain drive current at 2-5mA.
